## EDUCATION

**Bachelor of Technology in Computer Science and Engineering (AI Driven DevOps)** **Expected 2028**

Jain (Deemed-to-be University), Bangalore

**Relevant Coursework:** Analysis and Design of Algorithms, Machine Learning, Network Layers, Data Structures

## TECHNICAL SKILLS

|                                |                                                                                  |
|--------------------------------|----------------------------------------------------------------------------------|
| <b>Programming:</b>            | Python, Rust, CSS, HTML, MSQlS                                                   |
| <b>Frameworks &amp; Tools:</b> | Streamlit, Git, Termux, CLI, cargo xwin, Windows MSVC, Jupyter Notebook          |
| <b>Core Competencies:</b>      | Algorithm Design, UI/UX (Glassmorphism), Cross-Platform Dev, Systems Compilation |

## PROJECTS

### Game Library Management Web App

- Developed a comprehensive web application to track and consolidate video game titles across Steam, Epic Games, and local storage.
- Utilized Antigravity IDE for rapid development and streamlined coding workflows.

### Autoflix UI

- Engineered a Python/Streamlit frontend serving as a graphical interface for CLI-based media consumption tools.
- Enabled seamless searching and direct launching of local media players within the application.

### Lumen (Rust Windows Build)

- Configured a native Windows compilation pipeline for a system-level project using Rust.
- Managed complex dependencies and linker configurations using cargo xwin and windows-sys bindings.

## EXTRACURRICULARS & ACHIEVEMENTS

- Technical Problem Solving:** Mastered algorithmic concepts including Merge Intervals, Linked List manipulations, and advanced data structures for technical assessments.
- Competitions:** Active participant in hackathons and Capture the Flag (CTF) events, focusing on rapid software prototyping and cybersecurity problem-solving.
