SUMMARY

B.Tech CSE (AI-Driven DevOps) student bridging intelligent systems and scalable infrastructure. Build desktop apps in Rust/Tauri, data & AI pipelines in Python, and agentic workflows with Hermes/ChatML. Ship end-to-end: architecture, UI/UX (glassmorphism), cross-platform compilation, and CI/CD.

EDUCATION

Bachelor of Technology in Computer Science and Engineering (AI Driven DevOps)

Jain (Deemed-to-be University), Bangalore | Expected 2028

Relevant Coursework: Algorithms, ML, Network Layers, Data Structures, Cloud Computing, MLOps

TECHNICAL SKILLS

Programming:

Python, Rust, TypeScript/JavaScript, SQL, CSS, HTML

Frameworks & Tools:

Tauri 2, React, Streamlit, FastAPI/Flask, Next.js, Three.js, Git, Docker, cargo-xwin, Windows MSVC, Jupyter

AI & Agentic Systems:

LLM Function Calling, Hermes Agent (Nous Research), ChatML, SOUL.md Context Mgmt, Prompt Engineering, Local Model Inference

Core Competencies:

Algorithm Design, Glassmorphism UI/UX, Cross-Platform Dev, Systems Compilation, API Design, Multi-target (Windows/Android)

PROJECTS

Lumen - Desktop Game Launcher

Rust + Tauri 2 + React + TypeScript

Cross-platform game launcher with glassmorphic UI. Auto-discovers libraries via local process/file scanning (Steam, Epic, local). Typed IPC command bindings for safe frontend-backend communication. Per-session playtime tracking. Native Windows compilation pipeline with cargo-xwin and windows-sys.

Autoflix Interactive - Streaming Media App

Python + Streamlit + ani-cli + Async

Premium frosted-glass Streamlit UI via custom HTML/CSS injections. Orchestrates ani-cli as managed subprocess engine. Async background processes keep UI responsive. Local media player integration.

Campus Life Hub - Smart Campus Platform

FastAPI/Flask + SQL + Full-Stack + IoT

REST API with clean resource modeling for student-life workflows. Full event lifecycle (draft, publish, RSVP, archive). Sensor data integration (library seats, transit, events) to actionable insights.

AI System Monitor - Infra Watchdog

Python + FastAPI + Streamlit + Docker + Kubernetes + ML

Real-time CPU/memory/process telemetry. AI-driven anomaly prediction beyond threshold alerts. Infrastructure health insights in plain language. Containerized, K8s-ready.

Emberfall Valley - Low-Poly Web Adventure

Three.js + WebGL + JavaScript (Procedural)

Fully procedural stylized low-poly 3D world, zero imported assets. Runs offline in browser once loaded. Pure Three.js implementation.

Infra Log Analyzer - AI-Powered Ops Tooling

Python + Rust + TypeScript + React + IsolationForest

Multi-stack pipeline ingesting raw infra logs, surfacing anomalies/root causes. Rust file I/O, IsolationForest detection, glassmorphism React dashboard. Methodology documented in TeX.

Portfolio - Glassmorphic Next.js Site

Next.js + TypeScript + Framer Motion + Tailwind + Vercel

Particle canvas, cursor glow, scroll reveals. Turbopack, CI/CD on Vercel. Deployed at cyberpunk-portfolio-inky.vercel.app

EXTRACURRICULARS & ACHIEVEMENTS

- Smart India Hackathon (SIH) 2026 - Participant: Built end-to-end solution for PS26171 (Orbitveil) - AI-powered PII redaction with checksum-gated Indian identifiers (Aadhaar/Verhoeff, PAN, GSTIN, IFSC), air-gap kill switch, held-out eval n=100 (92/92).
- Agentic AI: Design layered system prompts with explicit role boundaries, strict JSON tool schemas, multi-turn tool loops, and parser-feedback error recovery for Nous Research Hermes models.
- Technical Problem Solving: Mastered algorithmic concepts - Merge Intervals, Linked List manipulations, advanced data structures for technical assessments.
- Competitions: Active in hackathons and CTF events - rapid software prototyping and cybersecurity problem-solving.
- Open Source: 7 public repositories on GitHub (ihave9lives) spanning Rust, Python, TypeScript, AI/ML, DevOps, and game dev.
